

ABSTRACT OF THE DISCLOSURE

The drill adapter for an ice auger is an adapter that allows an ice auger to be powered by a battery-powered drill. The device includes a receiver tube that is configured for attachment to an ice auger shaft, and an end cap with a removable driver bit for attachment to a battery-powered drill. The device also includes, as a safety feature, a floating shield that spins freely around the receiver tube thereby allowing rotation of the shield to be stopped while the device is powering an ice auger, and includes a spring within the receiver tube that absorbs vibration.
